

CREWSAVER SERVICING AND MAINTENANCE BULLETIN No. 16

ISSUED TO: All Approved Service Stations.

DATE: March 2006

SUBJECT: Approved Servicing Tool Kits

As part of our policy of continuous improvement, in line with the requirements of ISO 9000:2000, we have been working with a specialist manufacturer to develop a tool kit for the servicing of Crewsaver lifejackets. The tool kit comes in a handy carrying case as shown in the photographs overleaf.

This tool kit consists of three items:

A torque screwdriver for fitting schraeder valves into the gas flange.

A torque wrench for fitting the inflation heads to lifejackets.

A device for tightening the gas cylinders into the inflation heads.

All these items are illustrated in the accompanying photographs.

The tool kit is being introduced in order to raise the quality of servicing throughout the world and to ensure that all Crewsaver lifejackets are serviced to the same high standard.

We strongly urge all our approved Service Stations to purchase one of these tool kits which are available at a special introductory price of £666 instead of the normal price of £947. The sales part number to use when ordering is 10467 – Servicing Tool Kit.

When you receive your tool kit each item will have been pre-set to the correct torque setting. We will require you to have each item calibrated once a year and to send us a copy of the certificate of calibration. This will be a condition of your approval as a Crewsaver Service Station. The certificate will be held on file and may be used to help in any HSE enquiries.
